

### CALL RESOLUTION for 3 Postdoctoral positions to be covered by AGROTECNIO

The evaluation committee has carefully evaluated the merits and academic background of the candidates for each of the 3 post-doc positions offered by AGROTECNIO (deadline on December 22<sup>nd</sup>, 2017). As a result of the selection process, the following candidates (plus a back-up candidate) are proposed:

#### 1- Interactions between biofortified cereal crops and insects under varying NUE conditions

The committee declares the position void since none of the candidates fulfil adequately the requisites stated in the call.

#### 2- Mitigation of Food Hazards

- **Juan José Rodríguez Becomo (selected candidate)**
- Yelko Rodríguez Carrasco (candidate on hold)

The committee has particularly appreciated a very good publication record of Dr. Rodríguez in the asked topic of research and his previous and extensive experience in research projects, as well as his background as post-doc researcher in top international centres.

#### 3- Genomics of Complex Traits

- **Roger Ros Freixedes (selected candidate)**
- Manel Ben Hassen (candidate on hold)

The committee has particularly appreciated the outstanding trajectory of Dr. Ros-Freixedes in relation to his age, which in addition fits perfectly to the requirements of the offered post-doc position.

Lleida, January 19<sup>th</sup> 2018

Signed: the members of the committee
